

# Air Quality Notifications

## Forecast for Camden, NJ

### Today and Tomorrow's Forecast

Monday, Jun 28: 85 AQI Moderate

Ozone

Tuesday, Jun 29: 105 AQI Unhealthy for Sensitive Groups

Ozone

June 28: Despite hot and humid conditions, ozone and fine particle levels will remain in the moderate category throughout New Jersey due to gusty winds, showers, and thunderstorms associated with an approaching cold front. June 29: WARNING! Ozone levels are forecast to reach the unhealthy level for sensitive groups category in scattered locations across central and southern New Jersey, due to temperatures in the upper 80s and mostly sunny skies. Sensitive individuals, including the very young, the elderly, and persons with respiratory diseases such as asthma, should avoid strenuous outdoor activities during the afternoon and early evening hours. Fine particle levels are forecast to reach the moderate category for most of New Jersey due to brisk westerly winds.
